It is important to read the instructions first before mounting

Please install batteries in the UV1 sensor first
and then install batteries into temperature sensor

(1)   Hardware installation uv1

The first thing is to restart your weather station console by removing the battery compartment cover, which is located at the back of your consul you will see a small hole {reset} use a paperclip to insert it into the hole press firmly replace the battery compartment cover
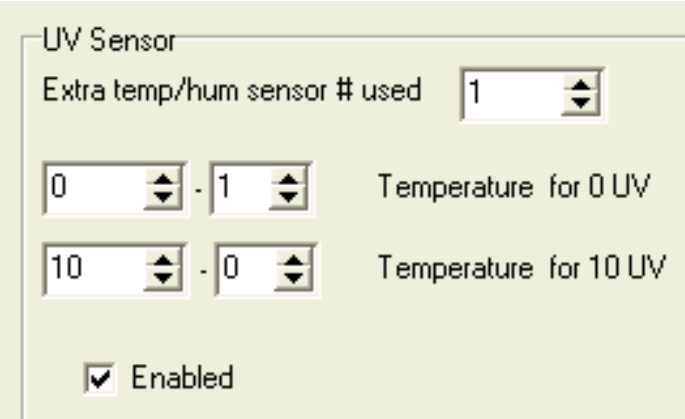

Your console display will now search for all your senses

(2)   Make sure you have the latest version of the weather display software current version 11.x

On the main page of weather display software **click on setup then go down to and click on
 advanced/Misc settings**
Click on WMR968, modified sensors (rain duration/UV)
Enter the information from image fig A

Fig A

UV Sensor
Extra temp/hum sensor # used   1

0 - 1   Temperature for 0 UV

10 - 0   Temperature for 10 UV

☑ Enabled

Important calibration for UV1

To work out if you need a offset cover the Uv1 sensor
so the sensor is in total darkness check in whether display
what your extra temperature sensor is reading for example if it is reading 0.6 this is the - offset
you need to enter this in the extra temp. Offsets for the number you have set
in the extra temperature sensor device

Go back to control panel click on Offsets & Initial Rain then click on extra Temp. offsets
Enter a offset in temperature, offset extra temp. 1 (10th of a C)
